Welcome Letter

Dear Colleagues,

It is a privilege and an honor to welcome you to the Second International Congress on *The Capital of Knowledge* of the European Association of Professors Emeriti that will take place in Naples on April 2022.

The main aim of the Congress is to protect the richness of contributions of professors emeriti and of any retired academician throughout Europe. Emeriti belong to the highest centile of the cultural enterprise of all European countries. They are ambulant libraries of their disciplines since more than ninety per cent of the knowledge that counts in their field has been developed during their academic lifespan. Their talents and creativity deserve to be protected and actively utilized. They should not be separated from the academies where they have served, they should just change their role from drivers - a role needing stronger energy-into members of the team, and not merely a minor role, in all human activities. The talent and creativity of emeriti is protected in many European countries where they can contribute to advancement of research and teaching. We are pleased that the European Union allows emeriti to have active roles in the programs they support.

The Naples congress will discuss the importance of Europe as the place of spirit and of politics rendering possible full participation of emeriti professors in mentoring and research. Mentoring is a vocation for life, and aging does not prevent scientific breakthroughs.

The congress of the EAPE is peculiar and is not driven by professional needs but rather by a willingness to serve the position of emeriti in the aging society, in line with the calls of UNO, WHO and the European Union for creative aging.

The problem of aging in artists and scientists is fascinating. As reported by the German poet, essayist and physician Gottfried Benn - nominated for a Nobel Prize five times - in the last four hundred years 150-200 geniuses determined the cultural progress of Western Europe. Half of them were old-old.

The abstracts of the Congress express the many souls of our association, our interest for research and the passion for teaching of our creative members. We would stress that a unique group of abstracts are authored by students, young scientists and still active full professors leading creative groups: they have been requested for assembling some intergenerational sessions, an innovation for this congress. As reported in *Science* in 2005 by Roger Guimerà et al., "Team Assembly Mechanisms Determine Collaboration Network Structure and Team Performance" thus newcomers provide the innovative ideas, the incumbents

are "storehouse for the pool of knowledge", thus newcomers working in teams with incumbents (seasoned scientists) will likely produce epochal ideas and breakthroughs teams made only of incumbents will not.

We thank the Hellenic Society of Cardiology and its President Professor Dr. Ioannis-Georgios Kanakakis, FESC, for hosting the abstracts in *Journal of Hellenic Cardiology*.

Recently a symposium on *Ageing of the Population: Challenges and Opportunities for Society and University* took place at the Croatian Academy of Sciences and Arts organized by Mrs. Snježana Prijić Samaržija, PhD, Professor of Philosophy, Rector, University of Rijeka and President of the Young European Research Universities Network and by the Association of Professors Emeriti in Rijeka. Many active, top European scientists in various fields and professors emeriti and emeritae, including the President of EAPE, were invited along with Dubravka Šuica, Vice-President for Democracy and Demography, European Community. The main conclusion of the event was "Building an age-friendly and emeriti/emmeritae-friendly university". This goal might be achieved by incorporating into the university all so called universities for the third age, that indeed are not universities. By contrast, in the university there would be all competencies and skills needed to render the university age-friendly as a service to the community. In addition, the creativity of emeriti and emeritae, a special category of professors who represent the highest centile of the cultural richness of a country, should be fully utilized for the activities of university.

The Capital of Knowledge moves from Athens-where the muses conferred creativity to humans-to Naples where the body of the siren Parthenope, daughter of Achelous and the muse Terpsichore, won by Odysseus' creativity, was buried.

Naples and its surroundings—capturing beauty and cultural heritage—represent an additional reason to come and to help making our congress a success.

Natale G. De Santo

PUBLICATION OF PROCEEDINGS

The Proceedings of the Second EAPE Congress will be published in a book edited by the Society for the Propagation of Useful Books in Athens.

DAY 1

Thursday April 28, 2022

Main Hall Grand Hotel Vesuvio
45 Via Partenope, Napoli

2.30 PM: Registrations

3.30-5.15 PM: Session 1 (plenary) - Academies (presentations 15 + 5 minutes)

Chairpersons:

Lucija Čok, Professor Emerita University of Primorska, Koper-Capodistria

Sir Les Ebdon, Professor Emeritus University of Bedfordshire, Luton

Giuseppe Marrucci, University Federico II, President Accademia Pontaniana, Naples, Italy
Accademia Pontaniana: A brief history

Goffredo Sciaudone, University of Campania Luigi Vanvitelli, Naples, President Società Nazionale di Scienze Lettere ed Arti in Napoli, Italy
The need for a unification of "knowledge" in medicine to protect the patient

Christos Zerefos, Faculty of Geology and Geoenvironment, University of Athens, Secretary General Academy of Athens, Greece
Manmade climate change and the world cultural and natural heritage

Wolfgang Kaltenbacher, Italian Institute for Philosophical Studies
The crisis of our age and the Italian Institute for Philosophical Studies

Ortensio Zecchino, President of Biogem, Genetic Research Centre "Gaetano Salvatore", Ariano Irpino, Italy
On the origin of Biogem

5.15-6.30 PM: Opening Ceremony

Vincenzo Bonavita and **Natale Gaspare De Santo**, Co-Chairs of the II EAPE Congress

Matteo Lorito, President University Federico II, Naples

Francesco Nicoletti, President University Luigi Vanvitelli, Naples

Roberto Tottoli, President University L'Orientale, Naples

Adolfo Russo, Vicar for Culture, Church of Naples

Carlo Lauro, President Association Professors Emeriti Federico II, Naples

Liv Mjelde, Professor Emerita, The Senior Centre, Oslo Metropolitan University

Nancy Papalexandris, President of the Association of Professors Emeriti of the University of Economics and Business, Athens

Constantin Soldatos, President Hellenic Branch of EAPE

6.30-7.05 PM: Session 2 (plenary) Lecture (5 min moderator +30 min presentation)

Chairperson: **Raymond Ardaillou**, Académie de Médecine Paris

Patrick Berche, Académie de Médecine Paris

Covid-19 Syndemic, a New Concept in Public Health

7.10-7.45 PM: Session 3 (plenary): Special Lecture (5 min moderator +30 min presentation)

Chairperson: **Paolo Pupillo**, Professor Emeritus University of Bologna

Riccardo Valentini, Director of the Impact Division of the Euro-Mediterranean Center, Nobel Prize 2007

Climate Change and the Challenge of a Rapid Ecological Transition.

DAY 2

Friday, April 29, 2022

Centro Congressi Università Federico II

36 Via Partenope, Napoli

8.00 AM: Registrations

9.00-11.20 AM: Hall A: Parallel Session no. 4 - Workshop on Nature (presentations 12 + 5 min)

Chairpersons:

Nikos Markatos, National Technical University of Athens, School of Chemical Engineering Athens

Maria Ochsenkuehn-Petropoulou, National Technical University of Athens-School of Chemical Engineering

Franco Pedrotti, Emeritus Professor University of Camerino

Franco Pedrotti, Emeritus University of Camerino, Camerino, Italy

The next Congress of the European Association of Professors Emeriti

Chairpersons:

Vincenzo Bonavita, **Natale G De Santo**, *Co-chairs of the Congress*

Sir Les Ebdon, University of Bedfordshire
The Third EAPE Congress on the Capital of Knowledge

1.10 PM: Lunch

An elective didactic activity for medical student structured on *The Capital of Knowledge*

Professor Alessandra Perna, Full Professor of Nephrology, and Professor Davide Viggiano, Associate Professor of Nephrology at the University of Campania Luigi Vanvitelli in Naples have organized around the Second Congress on *The Capital of Knowledge*, an elective didactic activity for medical student that will receive specific credits from the Medical Faculty.

The Elective Didactic Activity (ADE), an integral part of the curriculum, are didactic activities chosen by the student. ADE, as an integral part of the curriculum of the student, aim to personalize the student's educational path on the basis of their inclinations and interests, deepening specific knowledge and training aspects by discussion of topics that are not included in the "core curriculum" of the Integrated Courses.

GRANT SUPPORT

The Second EAPE Congress received unrestricted grants from:

Patrick Berche

COVID-19 SYNDEMIC A NEW CONCEPT IN PUBLIC HEALTH

Patrick Berche

Université de Paris

Email: patrick.berche@gmail.com

The pandemic of Covid-19 has emerged in 2019. Its lethality rate (deaths/ symptomatics) is estimated at ~ 0.5% in Western countries and up to 1-2% in several Southern countries. The rapid identification of the coronavirus SARS-Cov-2 allowed rapidly to develop diagnostic tests and to design very effective vaccines. In the 1990s, the anthropologist Merryl Singer introduced the innovative concept of syndemic, which opens new and global perspectives in the epidemiological approach to pandemics, such as AIDS, tuberculosis and malaria. A syndemic disease is characterized by the intertwining of biological, sociocultural and environmental factors that can aggravate the mortality rates of these diseases. A pandemic cannot be reduced to the interaction between a virus and a population. Its management must take into account the health status of populations, living conditions, cultural contexts, mentalities, behaviors, as well as the social, political and economic forces at play. The concept of syndemic applied to Covid-19. This pandemic is superimposed on other contagious diseases (AIDS, malaria, tuberculosis) and also to genuine non-infectious pandemics (diabetes, obesity, cardiovascular diseases, cancers, malnutrition...). These chronic diseases contribute to the mortality rate of Covid-19, which mainly affects the elderly people and high-risk patients. The concept of syndemic also includes sociocultural determinants that play a major role in the development of

Covid-19, which suddenly highlights the social disparities and the inequality of exposure, particularly the promiscuity linked to cramped housing and precariousness. Moreover, the emergence of this pandemic creates stress and fear leading to the stigmatization of patients and their contacts, denial of the pandemic, rejection of science, disinformation and fake news that create an irrational suspicion that can lead to violence. Fear is also related to social isolation induced by barrier measures and lockdown, with consequences for the mental health of individuals. Indeed, the Covid-19 pandemic has a strong impact on mental illness, including children, and an increase in suicide rates. In addition, the robustness of the health and social assistance systems, which depends on long-term political decisions, plays also an important role on the consequences of Covid-19. This syndemic approach opens new perspectives in the management of major health crisis that must be considered globally, not only at the level of a country but at that of the whole world. It highlights the importance of socio-economic, behavioral and environmental factors, including climate changes and air pollution, on the evolution of the pandemic.

Riccardo Valentini

CLIMATE CHANGE AND THE CHALLENGE OF A RAPID ECOLOGICAL TRANSITION

Prof. Riccardo Valentini

University of Tuscia, Viterbo

Email: rik@unitus.it

The issue of climate change and its impact on humanity can no longer be postponed. According to the latest IPCC report, changes observed in the atmosphere, oceans, cryosphere and biosphere provide unmistakable evidence of a warming world. In recent decades, key indicators of the climate system have reached levels not seen in centuries or millennia. The Mediterranean is at the center of an unprecedented climate change. Currently, the average terrestrial temperature of the region has exceeded 1.5° C and is intensifying on the one hand extremes of summer heat and drought and on the other increasing the temperature of the Mediterranean Sea and the dynamics of extra-tropical cyclones. In this context, the climatic scenarios foresee already in 2030 the exceeding of the 2° C threshold and therefore an intensification of the climatic extremes. For the Mediterranean, it is therefore of fundamental importance to act urgently to secure strategic sectors of the economy and society, making production and nature infrastructures more resilient to climate change. The Mediterranean has various vulnerabilities in relation to climate change:

hydrogeological instability, agricultural production, urban areas, natural areas, coastal areas and port infrastructures. Regional and local institutions are crucial for the implementation of the climate change adaptation strategy. The ecological transition of society needs continuous dialogue with citizens and local communities in a path of co-creation of the future society. Significant progress has been made in climate research thanks to new super-computing tools and advanced modeling for climate risk prediction and the creation of decision support systems for planning technological investments for adaptation. The integration of the most advanced scientific knowledge with territorial response policies to combat climate change is the only strategy possible today due to the dimension and urgency of the problems which, despite having a global dimension, have a decisive impact on life and development of local communities.

Dennis V. Cokkinos

CARDIOLOGY IN THE 21ST CENTURY

Dennis V. Cokkinos

University of Athens-Department of Cardiology

Email: dcokkinos@bioacademy.gr

The past, 20th Century, in which most of us pursued our activities, was a very good era for Cardiology and cardiac surgery, bringing cardiac catheterization, coronary arteriography, coronary care units, open heart surgery, pacemakers, defibrillation, ablation, and Interventional Cardiology, together with new drugs.

The past Century can be seen as the triumph of analog technology.

In the 21st Century we are moving to the digital era, characterized by artificial intelligence, machine learning and precision medicine, molecular mechanisms, gen- and the

many other - omics, high-throughput techniques, genetic editing, and many others which cannot be readily guessed, given the fact that medical knowledge currently doubles every 13 months; this trend is expected to further increase.

Predictions can easily be proven wrong. However, I would venture the following expectations: Heart surgery and interventional cardiology will decrease, the former to a greater with a new focus on valvular lesion corrections.

Lipid-lowering, molecular interventions will combat atherosclerosis and its sequelae. In heart failure and also, in arrhythmias, cell therapy will finally come of age under many new guises. Cell death of the myocardium will be prevented and a new facet, Anastasis -rising from the dead- will be encouraged.

However, all these therapies are costly. Financing will become a major problem, necessitating a multidisciplinary approach.

Human survival has increased very strongly in the last century. However, it is becoming apparent that this improvement is stalling, and may be reversed by 2040; this trend has become apparent even before the advent of the COVID-19 pandemic which has already cost 5.5 M lives and a huge economic backlash.

However, every war, and this pandemic is already an Armageddon, inevitably brings progress. I remain confident

that Cardiology, a major branch of Medicine, will overcome. Humankind a child of Heaven and the Earth will find means to answer to current challenges and will prevail. We, as senior teachers, have a responsibility to provide our experience and stoicity to help our fellow humans by offering information, encouragement and wisdom, but also by remaining active, continue our research and healing practices.

Session1 on Academies (abstracts)

Giuseppe Marrucci

ACCADEMIA PONTANIANA: A BRIEF HISTORY

Giuseppe Marrucci

Emeritus Professor, University Federico II of Naples

Email: marrucci@unina.it

As long ago as in 1443, Alfonso V of Aragon, new King of Naples founded the Pontaniana academy. After

the king, the second President of the Academy was the humanist and literary man Giovanni Pontano, from whom the academy takes its name. However, just a century later, in the troubled times of the Protestant Reformation, the Academy was felt as politically dangerous, and it was suppressed by the Spanish Vice-King, Peter from Toledo, in 1542.

The Pontaniana Academy was born again more than two centuries later, in 1808, when the Neapolitan Kingdom was part of the Napoleon Empire. In the new atmosphere of freedom, a group of intellectuals under the leadership of Vincenzo Cuoco re-founded the academy, which then succeeded in surviving the Restoration, i.e., the coming

back of the Bourbon King. The Pontaniana Academy went on successfully up to the present days, with the only exception of difficult times in the last years of the fascist regime, resulting in yet another suppression, followed by a second restoration under the Military Government of the Allies in 1944.

Today, the Pontaniana is made up of the following five classes: Pure and Applied Mathematics; Natural Sciences; Moral Sciences; History, Archeology, and Philology; Letters and Beaux Arts. The academicians of the five classes meet once a month, all together, to favor communication among the different disciplines.

Goffredo Sciaudone

THE NEED FOR A UNIFICATION OF "KNOWLEDGE" IN MEDICINE TO PROTECT THE PATIENT

Goffredo Sciaudone, Carlo Melodia

Università degli Studi della Campania Luigi Vanvitelli

Email: studio.sciaudone@libero.it

Eurispes and WHO data from 2019 revealed an increasing demand for unconventional medicines: 600 million citizens and about 500,000 doctors in the world. In Italy, the practice of MNC is the exclusive responsibility of the surgeon registered in the professional association and the remedies are on AIFA lists. From this situation the need of health professionals for a multidisciplinary training emerges in order to overcome the limitation of the specialist areas of competence, for a unitary vision of the patient. We will retrace the historical events that saw Naples (1821) as the first city in Europe to meet homeopathy and to introduce it into the Academy of Sciences (1822), then to spread it all around the world. From the 1980s, in Italy the need for

a cognitive investigation into homeopathy emerged, also to fit in the European reality. We were actively supported by many Institutional Authorities who had understood the need to recover the figure of the patient in his state of illness. For this purpose and motivated by the exclusive ethical interest, we have been engaged in the training of the homeopathic doctor using, in addition to a group of classical homeopathy teachers, also a large number of University Professors, not only of medical disciplines, to guarantee a judgment skills at the service of the patient according to Hippocratic indications.

Christos Zerefos

MANMADE CLIMATE CHANGE AND THE WORLD CULTURAL AND NATURAL HERITAGE

Christos Zerefos

Secretary General, Academy of Athens

Email: zerefos@geol.uoa.gr

Following the recent IPCC report in 2021, there is high certainty that global warming is proceeding faster than thought before. This resulted to the destabilization of our climate, seen clearly in the past few decades by the increase in the number and intensity of extreme weather and geophysical events. As a result of that, cultural and natural heritage became increasingly vulnerable to the adverse effects of global climate change. This unfortunate consequence of climate change has not yet been systematically integrated in global climate change mitigation and adaptation estimates. There is an immediate need for action before the damage to our common heritage becomes irreversible. In this work examples of climate-related damages seen on our natural and cultural heritage are presented. The analysis presents results on climate changes of extreme events indices at 275 UNESCO cultural

and natural heritage sites in the Mediterranean. Regional model simulations from Cordex EU project have been used to estimate the changes of extreme precipitation frequency, the fire weather risk index and mean sea level rise at coastal sites in the Mediterranean. The analysis has been done under two climate change scenarios namely RCP4.5 and RCP8.5 for which the changes between 2071-2100 relative to 1971-2000 have been calculated. It has been found that the vast majority of UNESCO heritage sites in the Mediterranean are threatened in a destabilized climate.

Antonio Gargano

THE CRISIS OF OUR AGE AND THE ITALIAN INSTITUTE FOR PHILOSOPHICAL STUDIES

Antonio Gargano

Council member Italian Institute for Philosophical Studies, Naples

Email: agargano47@gmail.com

We live in an age of big changes in all fields of human activities, from economy to spiritual expressions.

In front of these changes we are disoriented, we lack of reference points. In order to overcome this condition we need philosophy. As Plato said, we cannot operate well, in adequate direction, if we are not aware of what is good. Theory must come before action.

Philosophy is a creation of the Greek civilization, which was inherited first of all by Europe, but it is a common possibility of the whole mankind because it is grounded on reason, a common treasure of the human being. But philosophy has become a specialist discipline of academic organization of knowledge and has no goals in the public life. This is the reason why, in 1975 the Neapolitan Avvocato Gerardo Marotta 1927-2017 founded the Istituto Italiano

per gli Studi Filosofici.

The Nobel Prize in Chemistry and Honorary President of the Institute Ilya Prigogine wrote: "I can say that the rapprochement between physical sciences and the humanities has been facilitated thanks to the Italian Institute for Philosophical Studies. The Neapolitan Institute is an example of such rapprochement in the name of humanism. The institute, in fact, studies the traditional problems of philosophy as well as the classical problems of science. In this sense, the Neapolitan Institute plays a very important role in Europe". The Institute aims at expanding philosophical culture, by blending the major European tradition, but it promotes, alongside philosophical studies, all studies that can contribute to elaborating inherent problems and finding solutions in the spheres of various scientific disciplines, with the contribution of experts of every country in the world.

Ortensio Zecchino

ON THE ORIGIN OF BIOGEM

Ortensio Zecchino

President of Biogem, Genetic Research Centre "Gaetano Salvatore", Ariano Irpino

Email: presidenza@biogem.it

In my third age, for a chance, I had the gratifying opportunity to give life to a small-large enterprise with high scientific and social value. In the mid-nineties,

when I chaired the Senate Culture, Education and Scientific Research Commission, with Gaetano Salvatore, my beloved friend and renowned physician, and Renato Dulbecco we submitted the proposal for a biology and molecular genetics institute. With Dulbecco's support, I suggested to build it in Ariano Irpino, my home town.

Our project was eventually selected, and Biogem consortium was born in 1997, soon after the unexpected death of Gaetano. At that time I considered my work done, but in 2004 I was asked to get the responsibility for Biogem, which had huge difficulties in starting its activities. Thus I found myself living a bet that is daring and stimulating at the same time.

Even if only half of the structure was ready, the institute was opened in 2006 at the presence of Rita Levi Montalcini. During the following years we have been working hard in order to complete the structure and to develop scientific activities, trying to make Biogem not only an important biomedical research centre, but also a cultural institute operating in a very suburban area. A Museum of Earth and Life History has been created, and Biogem organizes a yearly meeting, "The two cultures", in order to facilitate the dialogue among scientists and scholars in the humanities.

Biogem has got important endorsements, including from several Nobel Laureates, and it has been visited by the President Sergio Mattarella in 2018.

Sir Adrian Smith

THE COMMUNICATION OF SCIENCE IN A PANDEMIC

Prof Sir Adrian Smith PRS

President, The Royal Society, London

Email: president@royalsociety.org

The past two years have seen science thrust, very publicly, into the very heart of all our societies. Virology, Epidemiology and complex mathematical modelling

have moved from the scientific journals to the front pages of national newspapers and websites and led all news reports. Science has been celebrated for the speed at which it provided understanding of the virus and the scientific community has been lauded for the success of treatments and ultimately for delivering vaccines that have changed the game. However, there have been major challenges to how we communicate science and the inherent uncertainty that lies at the heart of the scientific endeavour. In a time of crisis people want certainty and they often think that is what science is about. They think of the lists of scientific laws they learnt at school. But science, particularly at the cutting edge, is all about uncertainty and it is vital that people understand that. It is vital that scientists communicate not only what they do know, but how confident they are in that knowledge and importantly

what they do not know. We also need our media and opinion leaders to accurately reflect what the scientists are saying. Many policy makers initially used a mantra of 'following the science' as though somehow there was a simple set of instructions and that if mistakes were made it was the fault of 'the science'. Of course, 'the science' does not exist. A little over two years ago, no one had heard of COVID-19. A huge, open, international collaboration sequenced its genome with amazing speed but today we can still not predict where or when significant variants will emerge or what they will look like. The exposure to so much scientific information for so many people will have raised the general level of scientific literacy and that is a good thing – it will hopefully have not just allowed people to gain knowledge but also to gain an understanding of how that knowledge was acquired and what its limits are.

That will be the measure of how well we have communicated science in the pandemic.

INSTRUCTIONS TO AUTHORS

The *Bull Eur Assoc Profs Emer* is the bimonthly cultural Journal of the European Association of Professors Emeriti (www.Europemeriti.org) that supports the vocation of Professors Emeriti for teaching and Research. It is structured in two main section *Original manuscripts* that undergo peer review and the *section on News* that covers the life of the association and is under the care of the Editorial board.

The Bulletin adopts the Vancouver style. Authors are invited to visit the website of the Association and read the last issue. Manuscripts shall be in good English in Word, font 12, with good illustrations and shall be emailed to the editor in Chief, Natale Gaspare De Santo MD.

• Email: nataleg.desanto@unicampania.it

Original manuscripts (Word file) around 900-1100 words shall include affiliation(s), email and phone numbers of the authors, as well as 5 keywords from the manuscript. Preferably titles should not exceed the length of 50 characters (spaces included). A portrait of the 1st author is required. 1 Figure and 1 Table (emailed on separate sheets) and a maximum of 6 references and a minimum of 3 are allowed. References must be numbered and ordered sequentially as they appear in the text. When cited in the text, reference numbers are to be in round brackets.

Manuscripts related to news about emeriti and their associations shall be limited to a maximum of 500 words, and up to 3 references; no portrait of the author is required, but 1 Figure or 1 Table can be added.

All manuscripts undergo editing.

At the end of the article number references consecutively in the order in which they are first mentioned in the text. For articles with more than 6 authors, list the first 3 authors before using "et al."; For articles with 6 authors, or fewer, list all authors.

JOURNALS

1. *Journal article published electronically ahead of print*: Authors may add to a reference, the DOI ("digital object identifier") number unique to the publication for articles in press. It should be included immediately after the citation in the References.

Bergholdt HKM, Nordestgaard BG, Ellervik C. Milk intake is not associated with low risk of diabetes or overweight-obesity: a Mendelian randomization study in 97,811 Danish individuals. *Am J Clin Nutr* 2015 Jul 8 (Epub ahead of print; DOI: [doi:10.3945/ajcn.114.105049](https://doi.org/10.3945/ajcn.114.105049)).

2. *Standard journal article*. List all authors when 6 or fewer; when 6 or more, list only the first 3 and add "et al." Abbreviate journal titles according to *Index Medicus* style, which is used in MEDLINE citations.

De Santo NG, Altucci P, Heidland A et al. The role of emeriti and retired professors in medicine. *Q J Med* 2014;107: 407-410

3. Committee on Infectious Diseases, American Academy of Pediatrics. Measles: reassessment of the current immunization policy. *Pediatrics* 1989; 84:1110-1113.

BOOKS and other MONOGRAPHS

1. Personal authors

Antier JJ. Jean Guittou. Milan, Paoline, 2002

2. Committee report or corporate author

World Health Organisation. Good Health Adds Life to Years. Geneva, WHO, 2012.

3. Chapter in book

De Santo NG. The priority: broadening the boundaries of paediatrics and turning basic science into cures. In Erich J, Corrad F, De Santo NG, ed. This I think should have priority in child health care services. Joachim Barke, Hannover 2018:69-71.

4. Agency publication

Committee on Infectious Diseases, Report of the Committee on Infectious Disease, 22nd Edn. American Academy of Pediatrics. Elk Grove Village, 1991; 319-320.
